MacRorie-McLaren Company, Landscape Engineers.
Now in process of development.

THE MacRorie-McLaren Company had its inception in the year 1909, establishing a business devoted to landscape engineering and establishing a general nursery at Beresford, San Mateo County, where all varieties of ornamental trees and plants are to be found, both indoor and outdoor. A large portion of the beautiful Christmas and Easter flowering plants which are on display in the various florists' stores throughout the bay region are raised by them for this trade, specialties being made of Cyclamen, Poinsettias and Begonias.

A large force of trained landscape engineers and skilled landscape gardeners is maintained under the direct supervision of Mr. Donald McLaren, who has specialized in this line of work for many years, and who as assistant chief of the department of landscape gardening at the Panama-Pacific International Exposition had direct charge of the execution of all of the planting work of our World's Fair in 1915. The firm thus provides a service unique in character and equipped to handle work of any class in this line of endeavor, irrespective of size, large or small. It is thoroughly equipped to design and execute work of any character such as the building of lakes, concrete walls, swimming pools, tennis courts, roads and walks, pipe systems, as well as all ordinary work connected with the gardening profession.

PREPARED AND WORK EXECUTED BY MACRORIE-McLAREN COMPANY

The MacRorie-McLaren Company maintains at its nurseries unique specimens of many varieties of plant life, in very many cases not obtainable elsewhere. The accompanying illustration of Irish Yews shows plants 20 feet in height, in addition to which there are many other magnificent specimens of Retinosporas, Eugenias, Wisterias, Hollies, Rhododendrons and other interesting and rare specimen plants.

An illustration showing a view taken of an informal lake effect executed by the firm for Mr. and Mrs. Wm. J. Leet at San Jose. This photograph was taken two weeks after installation and shows what it is possible to create and what a finished product can be executed in a short period of time. Men and material are available for this class of work on immediate call and this firm has built up its reputation by its prompt and efficient methods of handling its business. It stands behind its work at all times and has an almost unlimited number of satisfied customers who are really "Boosters."
